September 2026**

Precision Underground: DD210 Delivered in The North West Province.

Johannesburg, SouthAfrica - September 2026

Deep beneath the North West Province, progress is measured one blast round at a time. On the **03 of September 2026**, Buraaq Mining Services proudly delivered a **DD210 Drill rig** to a mining operation in the **North West Province in Mooinoi**, another milestone for a company that mines trust well as value.

Meet The DD210

The DD210 is a **compact, single boom, electro hydraulic jumbo, engineered from the ground up for underground mining and tunnelling**. Where space is tight and headings are narrow, it moves with confidence. It's compact frame lets it work in confined development ends that larger rigs cannot reach, without giving up the power and precision the job demands.

Performance at the Rock Face

At the heart of the machine are its **single boom** and **electro hydraulic system**. Together they deliver accurate, consistent drilling at the face, supporting clean profiles, dependable advance rates and a more productive shift. The electro hydraulic drive also contributes to a **cleaner underground environment**, a real advantage in enclosed workings. Built for harsh conditions, the DD210 is simple for operators to run and practical to service.

The Buraaq Standard

Deliveries like this are what set Buraaq Mining Services apart. We do not simply supply machines. We source the right **equipment for application, deliver it on time and stand behind it long after it arrives on site**. Our customers choose us for our reliability, our industry knowledge and our commitment to getting the job done properly and each delivery add to that reputation.

None of this would have been possible without the people behind the name. We extend our sincere thanks to the entire Buraaq team, whose dedication, hard work and attention to detail made this delivery a success. Your commitment is the reason our customers continue to trust us.
